EXP 4: Data modelling and form design for a business application in Zoho Creator.

4a: Student Admission Enquiry Form — Basic Fields Use Case

AIM:

To design and develop a **Student Admission Enquiry Management** application using **Zoho Creator** and create an **Admission_Enquiry_Form** that captures prospective students' personal details, contact information, academic interests, counselling availability, and consent in a structured manner by utilizing all thirteen Basic Fields available in the Zoho Creator Form Builder. The application also generates an **Admission_Enquiry_Report** to enable the Admission Cell to view, filter, review, and follow up on submitted enquiries.

THEORY:

Zoho Creator is a cloud-based **low-code application development platform** used to create custom business applications with minimal programming. It provides tools such as forms, reports, workflows, dashboards, and automation to help organizations collect, manage, and analyze data efficiently.

In this application, a **Student Admission Enquiry Form** is created to digitize the process of collecting admission-related information from prospective students. Instead of maintaining enquiry details through phone calls, paper records, emails, or separate spreadsheets, all information can be collected through a single centralized online form.

The form is designed using the **Basic Fields** provided in the Zoho Creator Form Builder. These fields allow different types of data to be collected and validated appropriately.

PROCEDURE:

Step 1: Applicant opens the public form link shared by the Admission Cell.

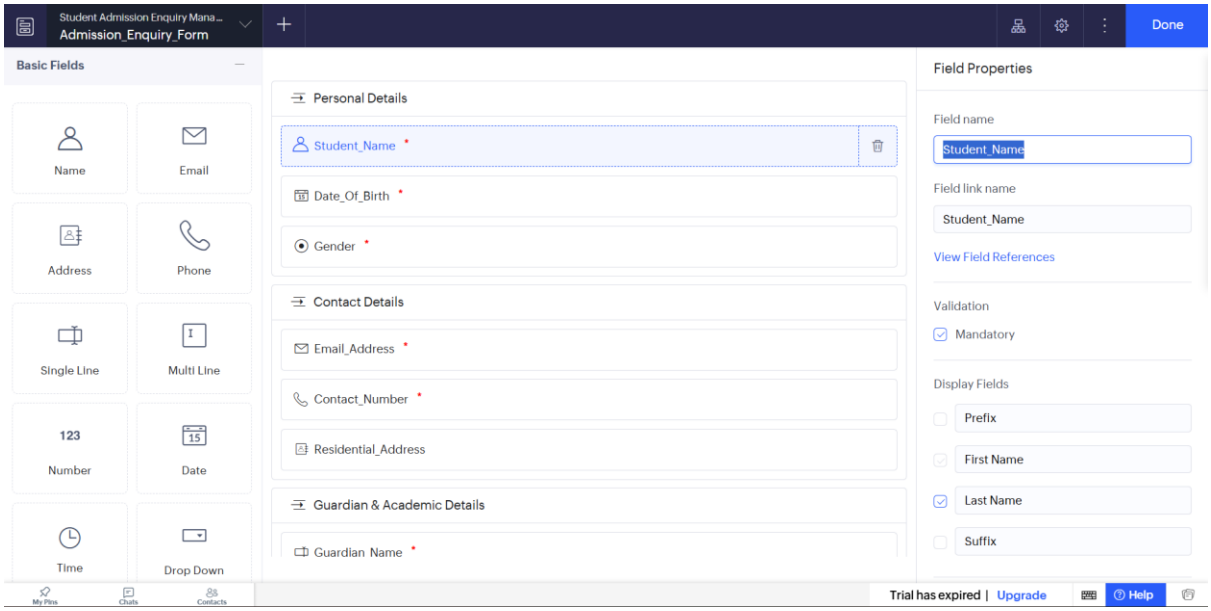

Step 2: Applicant fills in personal, contact, academic, and scheduling details across the four sections.

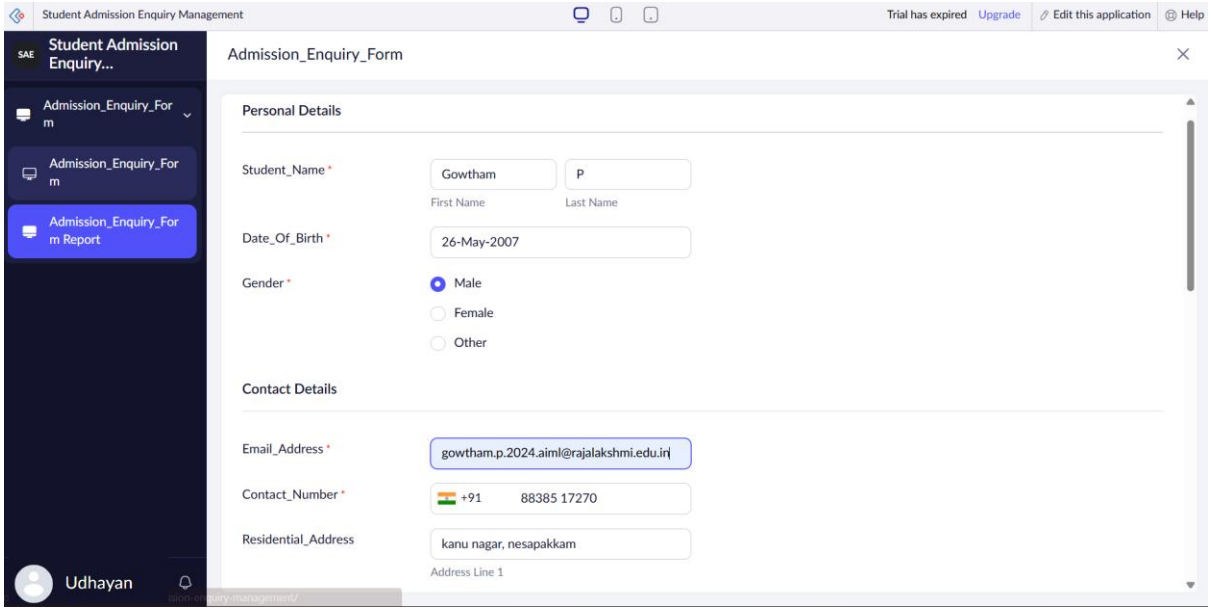

Step 3: On clicking Submit, Zoho Creator validates all mandatory fields and formats.

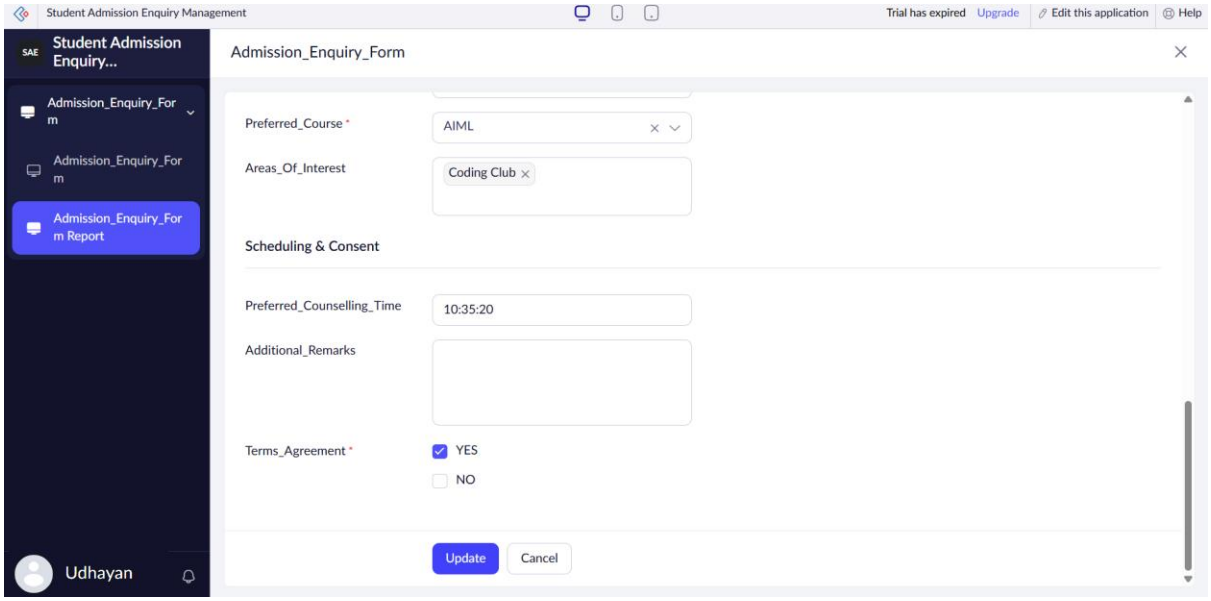

Step 4: A new record is created in the Admission_Enquiry_Report.

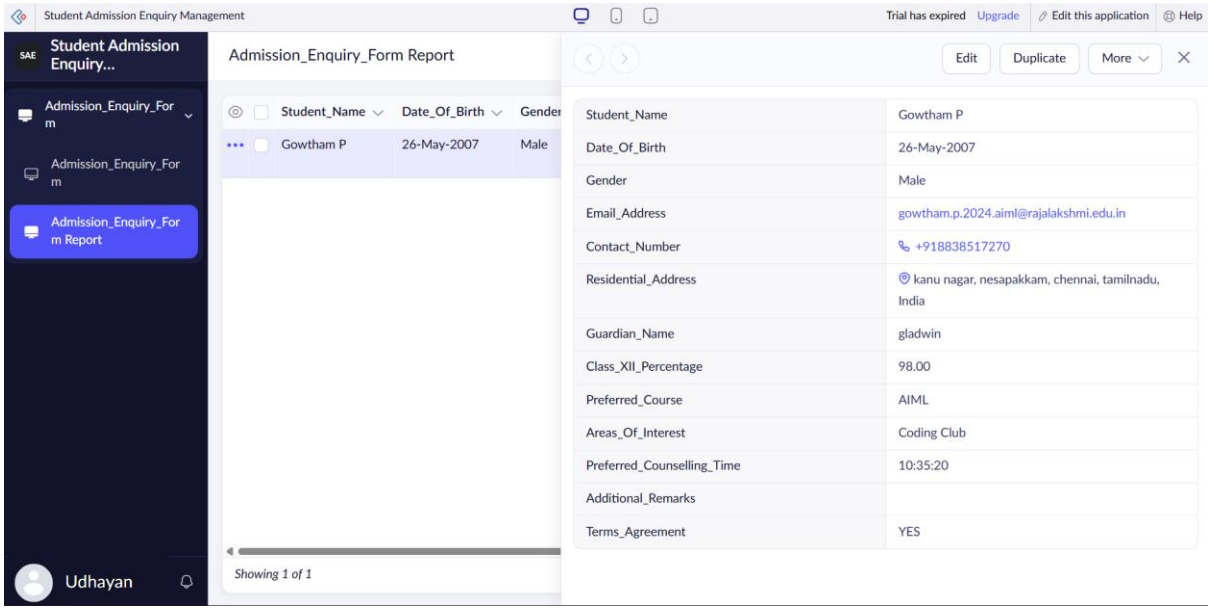

Step 5: An automated confirmation email (using the Email field value) is triggered to the applicant.

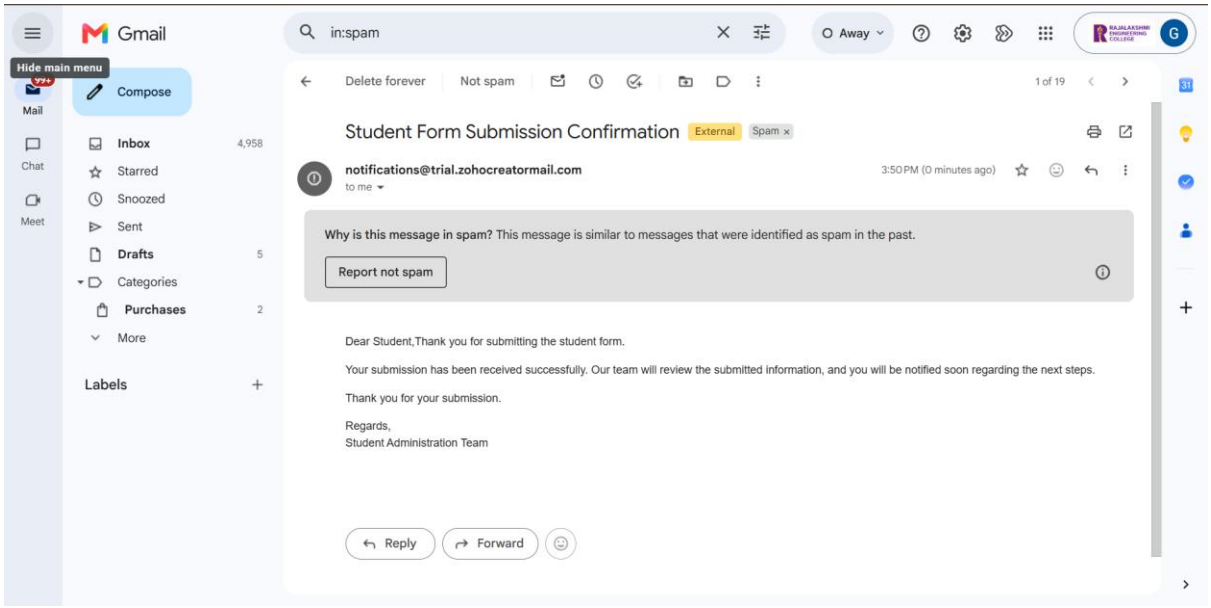

Step 6: The Admission Cell reviews the report, filters by Preferred Course, and schedules a counselling call using the Preferred Counselling Time.

RESULT:

Thus, the **Student Admission Enquiry Management** application was successfully designed and developed using **Zoho Creator**. The **Admission_Enquiry_Form** captures student information using all the required Basic Field types, while the **Admission_Enquiry_Report** provides a centralized view for the Admission Cell to review, filter, and follow up on student admission enquiries.
