Experiment No. 9: AI and Analytics Using Zia

AIM

To study the AI capabilities of Zia and explore data analysis and insights in the Student Admission Management System using Zoho Creator.

THEORY

Zia is Zoho's AI assistant that helps users analyze data, identify patterns, and generate insights. In Zoho Creator, AI and analytics features help users understand student admission data and support better admission planning and decision-making.

Key Features:

- **Data Analysis:** Analyzes student admission records to identify application trends and patterns.
- **Charts and Reports:** Displays admission statistics using charts and visualizations.
- **Predictions:** Supported AI features may help identify admission trends based on available student data.
- **Natural Language Interaction:** Supported Zia features may allow users to ask questions about student admission data using natural language.

PROCEDURE

1. Log in to Zoho Creator and open the Student Admission Management System.
2. Add sample student and admission application records to the application.
3. Navigate to the Reports section.
4. Create charts and summary reports using the available student admission data.
5. Explore the Zia or AI-powered features available in the account.
6. Analyze admission trends, application counts, and admission status.
7. Verify the AI-generated insights using the application records.

APPLICATION

In the Student Admission Management System, Zia analytics can help identify the number of applications received, monitor admission status, compare applications across courses, and generate reports for admission planning. Charts and summaries help administrators evaluate admission activity efficiently.

RESULT

The AI and analytics capabilities of Zia in Zoho Creator were studied. Reports, charts, visualizations, and available AI insights can help analyze student admission data and support better admission planning and decision-making.
